ABSTRACT. Association of some integers  $n \geq 54$  to divisibility classes in the Shevelev article of 2007 is corrected.

1. SUMMARY

The examples in Section 5 of Shevelev’s article on the divisors of binomials are faulty where they concern the cases  $n = 54, 60, 68, 70, 72, 78, 91$ , and  $96$  [1].

1.1. **Section 1.** On page 121, the list of  $n$  for which  $B_n$  contains a divisor of  $n$  should be extended to  $18, 45, 48, 70, 72, 75, 84, 90, 100$ . We note that this list contains 74 members in the range  $n \leq 500$ , 174 members in the range  $n \leq 1000$ , 274 members in the range  $n \leq 1500$ , and 379 members in the range  $n \leq 2000$ .

1.2. **Section 5.1.** A corrected and slightly extended list in Section 5.1 is:
